

# The standard method of assessing housing need

March 2024

**Turley**

This document has been produced in collaboration with the Land, Planning and Development Federation (LPDF) to confirm the minimum housing need currently implied for every local authority in England by the Government's standard method, following the release of new affordability ratios on 25 March 2024.

These new ratios – released annually to reflect the situation in the previous year, in this case 2023 – alter the scale of the affordability uplift applied to the baseline at the second step of the standard method, before the resultant figure is capped in some cases and a 35% uplift is then applied to England's twenty largest towns and cities<sup>1</sup>. It is important to note that the cap may well negate the impact of the new affordability ratios in some instances, where they continue to imply a need for uplifts larger than the permitted 40% and the minimum need is therefore unchanged.

This document estimates the outcome of the method for every local authority as of March 2024, with these figures likely to remain largely unchanged through to the end of the year unless the method itself is revised<sup>2</sup>. Comparison is made, for context, to figures calculated earlier this year using affordability ratios that have now been superseded, as well as to peak annual delivery since 2001 and existing housing requirements where applicable<sup>3</sup>. These metrics are colour coded to show, at a glance, whether the current outcome of the method is **higher** – signifying a positive increase in housing need – or **lower**.

## Overview of the standard method

**2014-based projection** of household growth over the next decade, annualised

Adjustment linked to most recently published **affordability ratio**

**Capped** 40% above either the projection or an existing housing requirement, if higher and/or adopted in the last five years

35% uplift applied to the twenty largest **cities and urban centres**

## Regions

<sup>1</sup> Birmingham, Bradford, Brighton and Hove, Bristol, Coventry, Derby, Kingston upon Hull, Leeds, Leicester, Liverpool, London, Manchester, Newcastle upon Tyne, Nottingham, Plymouth, Reading, Sheffield, Southampton, Stoke-on-Trent and Wolverhampton.

<sup>2</sup> Figures will only change where housing need is currently capped above an existing housing requirement that becomes more than five years old, or it becomes capped following adoption of a lower housing requirement after March 2024.

<sup>3</sup> Existing requirements initially collated by the former Department for Communities and Local Government in September 2017, and since periodically updated by Turley based on the Planning Inspectorate's monitoring of adopted Local Plans. Newly formed authorities are taken as having no adopted requirement, given our experience that few of their predecessors were generally affected by the cap. Past delivery in such areas has though been aggregated to the newly formed geographies, drawing upon data published by the Department for Levelling Up, Housing and Communities.

## 189 local authorities

have seen their affordability ratios improve since last year, by an average of **6%**

## 99 local authorities

are now facing a worse situation, with their ratios rising by an average of **5%**

## 305,503 homes now implied to be needed annually

when incorporating the new ratios into the standard method

### Only 1% less

than implied previously this year

### Still 30% higher

than delivery in 2022/23

**Small reductions** in every region but the Midlands, but still implying a need to **markedly increase delivery** in London and the South

**140 authorities** see reductions when incorporating the new ratios

Average reduction of **22 dwellings per annum...**

...but **83** have changed by less than half as much...

...and **all** had relatively low figures to begin with<sup>4</sup>

**81 areas** see increases of **13 dwellings per annum** on average

**75 areas** see no change, largely but not only because uplifts are capped

**13 areas** benefit from recently adopted housing requirements, which replace the demographic baseline as the foundation for their cap

**12 areas** see no change because their new ratios are identical, or only fractionally different, to the ones they replaced

<sup>4</sup> The average need in the 140 areas seeing reductions was originally around 891 dwellings per annum, 24% below the average in the areas seeing no change or an increase (1,171dpa)
