SERVICES

Strategic Communications

Our role

- We provided Strategic Communications services on behalf of Forth Energy to support Section 36 applications for three biomass renewable energy plants located across the east of Scotland.
- We developed a community engagement programme that was tailored for each of the three sites to deliver a successful consent for the client.
- By providing a bridging role between PR and engagement activities we ensured that a consistent and positive message was presented across all project publicity.
- We organised a series of public events including exhibitions, one-to-one meetings and stakeholder events.

Results

- Following the events, we captured information gathered at exhibitions and meetings to ensure clear feedback was provided to the client and documented accurately within the Environmental Impact Assessments and Statements of Participation which supported the Section 36 applications.
